

VATSAF Position, Frequencies and Squawk Codes

All frequencies used for ATC need to be approved by VATSAF!

For this, a vACC can request a frequency directly through VATSAF. VATSAF will consider a new frequency for an area or station control if:

- the frequency is published on official charts
- no other station in range has already occupied
- the frequency and the setup makes sense for the VATSIM structure

In case of agreement, VATSAF informs the vACC and publishes the agreed frequency in this policy. Squawk code ranges to identify IFR traffic can also be requested from VATSAF following the same rules.

Approved Position and Frequencies:

vACCSAF
